

# BRINGING HOT RUNNING WATER TO THE COMMUNITIES

No RDP house, new or old has any hot water or a bath in it and cannot take a conventional geyser as they do not get enough electrical ampage to run this. Tshisa Bathrooms are trying to correct that imbalance.

"I designed a cost effective geyser that would save on electricity and fit into any RDP house eliminating the boiling of kettles...so that families could bath in hot water that we take for granted..." says Piet Uys, inventor and CEO of Tshisa Bathrooms.

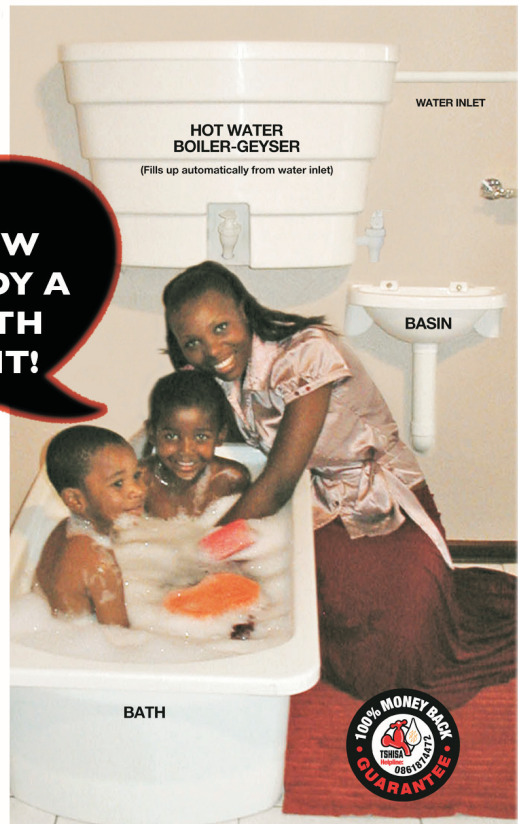

The moulds were made in China, then shipped to South Africa where a local injection moulder was approached to manufacture the product. Local companies supply the components and the product now carries the Proudly South African mark of quality.

**BUY NOW  
AND ENJOY A  
HOT BATH  
TONIGHT!**

The geyser has SABS safety approval, holds 65lt of water with a 60°C thermostat and is gravity fed. It fits onto any wall with 3 bolts that are supplied and an inlet valve to control water flow. In fact it works like an oversize toilet cistern but heated.

The suggested retail price for the geyser is R795 and for a geyser with bath and basin R1500.

The company's passion is to get as many bathrooms into these houses and uplift their living conditions by giving them access to a basic need that we all take for granted  
**-HOT RUNNING WATER.**
